Hunt Valve: Experts in Extreme Engineering

Dependability. Reliability. Safety. That's what military and industrial manufacturing customers around the world demand from their severe-duty valves, actuators and hydraulic system components.

At Hunt Valve, we've been delivering fluid power engineering innovations and system solutions for military and industrial applications for nearly 100 years.

We're the Experts in Extreme Engineering because we understand the goals and challenges of our customers. We use this knowledge to manufacture and engineer solutions that deliver unmatched quality and dependability in the harshest, most demanding environments.

Target Markets

Hunt Valve specializes in severe-duty valves and complementary engineered solutions for four key markets:

1. PRIMARY METALS

Our durable descaling system products and directional control valves deliver low-maintenance, continuous operation in steel and aluminum mills.

2. ENERGY

Our water hydraulic valves and specialty cylinders ensure quality and dependability in nuclear, hydro and downstream oil & gas applications.

3. PROCESS

Our severe-duty valves and components help chemical processors manage flow volume and pressure in the plant.

4. DEFENSE

Our custom valve manufacturing expertise, robust quality system and process controls are compliant with MIL-I-45208 and ISO 9001 standards in support of the U.S. Navy's requirements for new construction and replacement valves on existing ships in the U.S. nuclear fleet.

Supporting demanding industries with demanding applications, Hunt Valve has been proving that it's up to the challenge for nearly 100 years.

Products and Engineered Solutions

We design and manufacture proprietary and build-to-print valves for critical-service and industrial manufacturing applications. Whether you need a specialized linear actuator, hydraulic system or control

valve, Hunt Valve has the optimal solution to help you manage flow volume and pressure—even in the most extreme environments.

Looking for a customized automation solution to safeguard and control flow? Our skilled engineers can alter the design and dimensions of most of our products to suit your plant's application requirements.

Rapid Response on Remanufactured Components

We can quickly remanufacture our valves to like-new condition with a full warranty—extending the value and useful life of your product.

State-of-the-Art Facilities and Testing Equipment

Our state-of-the art technology, facilities and equipment are designed and maintained to meet the highest quality standards. We perform regular maintenance and inspections to ensure consistent quality and reliability.

Assembly and Testing

Our engineering team utilizes strict controls and assembly procedures to ensure that each engineered solution meets all contract and drawing specifications. We utilize in-house testing for high- and low-pressure applications.

Dedication to Quality

We know how important quality processes, policies and procedures are to our military and industrial customers. That's why we've implemented a quality system that is compliant with MIL-I-45208 and ISO 9001 standards.

Hunt Valve's Quality Assurance Department pays close attention to every detail, from order entry to final inspection.

Contact the Experts in Extreme Engineering

As the Experts in Extreme Engineering, Hunt Valve is ready to help you with your toughest military or industrial application, using the best products, manufacturing technology and engineering team available. To learn more or request a quote, visit <http://www.huntvalve.com/> or call (800) 321-2757.
